

README6

Data:

The macroeconomic data include the monthly US Romer-Romer monetary shock (RRCGShock), as extended by Coibion, Gorodnichenko Kueng and Silvia (JME, 2017). Alternative shock variables are present but not used.

The other data used are monthly levels of the unemployment rate, PCE deflator, and the Fed Funds rate, all taken from FRED at <https://fred.stlouisfed.org/>.

Code:

The file all.do calls the two other do files, which load the data, do the LPs, and then save the output.

Some sections of code are commented out, but available if users desire.
