

README7

Data:

Most macroeconomic data are taken directly from the replication code of Cloyne and Huertgen (AEJ Macro 2016). Additional control variables are the log relative price of oil for the UK, which is set equal to the WTI price converted into GBP and deflated by the UK CPI, and the log Narrow Effective Exchange Rate for UK. These are constructed from FRED data by the `make_data` do file.

Code:

The file `all.do` calls the two other do files, which load the data, do the LPs, and then save the output.
